

Holland × RailVision — Co- Sell Partner Memo (Draft v1)

Date: December 1, 2025

From: Michael, Chief Strategy Officer

To: Jamie O'Rourke (CEO), Sales, Product, CS, Ops

1) Purpose

Decide whether to pursue Holland as a **non- exclusive co- sell partner** to accelerate adoption with shortlines regionals, while preserving RailVision's direct customer relationship and data rights.

2) Why Holland (Short Version)

- **Access & trust:** Embedded relationships with shortlines; routine site presence via maintenance/services.
- **Credibility with crews:** Field techs/operators know them; helps overcome engineer adoption friction.
- **Complementary footprint:** We're tablet- first, low- capex, rapid deploy; they can bundle us without locomotive surgery.
- **De- risked pilots:** Faster intros, easier scheduling, shared onsite enablement.

Non- go risk: If they insist on exclusivity, reseller control (they invoice), or restrict our data rights.

3) Partnership Model (Guardrails)

Type: Referral + co- sell (no reseller/white- label).

Territory: North America shortlines & regionals; *explicitly non- exclusive*.

Positioning: "Engineer- first efficiency companion" (not autopilot, not surveillance).

Customer relationship: RailVision holds SOW, price, and renewals.

Data rights: RailVision receives usage, trip, and baseline/performance data for all joint deployments.

Brand: Co- branded field materials; RailVision logo primary on product/UI.

4) Commercial Terms (Draft for Redlines)

- **Economics (choose one per deal):**
 - 1) *Referral fee*: 10–15% of first- year net revenue (NRR), paid on customer cash receipt.
 - 2) *Co- sell split*: RailVision retains 100% revenue; Holland receives fixed success fee per signed SOW + milestone bonus after 90- day adoption target.
 - **No reseller**: Holland does **not** take title or set price.
 - **Services**: Holland may provide paid field services (install assistance, crew coaching, change- management) under a separate SOW with the railroad; scope coordinated in joint plan.
 - **SPIFs**: Modest sales SPIFs for Holland AEs/field reps (e.g., \$500 per qualified POC, \$2,000 per closed- won >\$50k).
-

5) First 90 Days — Joint GTM Plan

Goal: 3 signed POCs and 1 production contract from target shortlines; show statistically significant fuel/time savings and high crew acceptance.

A. Account Mapping (Week 1)

- Build a 25- logo target list (shortlines regionals) with: fleet size, freight mix, decision maker, relationship owner, and intro path.
- Secure 6 joint exec calls on calendar; define deal hypotheses and pilots.

B. POC Kit (Weeks 1–2)

- Baseline & measurement plan (fuel/consumption, schedule adherence, throttle/brake usage).
- Success metrics with confidence intervals; target 5–10% fuel savings where applicable.
- Standard SOW; value- based pricing examples.

C. Adoption Playbook Enablement (Weeks 2–3)

- Train Holland field staff on crew- first adoption: messaging rubrics, ride- along coaching, scorecards, and feedback loops.
- Co- develop a 1- pager for engineers: benefits, what it is/isn't, how data is used.

D. Pipeline & Ops Rhythm (Weekly)

- Joint deal review; stage progression; blocker removal.
- Shared tracker of intros, meetings, POCs, and deployments.

Exit/Review Gate (Day 90): If <3 qualified POCs signed or data rights not honored, we pause/renege.

6) Success Metrics & Proof

- **Commercial:** 3 POCs signed, 1 production contract, \$X in new ARR (target to be set per logo size).
 - **Adoption:** ≥70% active crew use in POC, positive NPS from engineers, <10% opt- out.
 - **Operational:** Time- to- first- train ≤ 14 days from SOW; pilot runbooks executed.
 - **Savings:** Documented fuel/time savings with methodology and CI; publish 2 anonymized case snaps for demand gen.
-

7) Risks & Mitigations

- **Channel conflict / loss of intimacy** → Co- sell only; RailVision controls SOW/pricing; joint QBRs.
 - **Slow sell- through** → 90- day quota + exit clause; named- account plan with executive air cover.
 - **Messaging drift (“autopilot” expectations)** → Shared talk- track; review/approve external materials; crew- first coaching.
 - **Data friction** → Data clause in MSA/SOW; secure transfer mechanism; anonymization standard.
 - **Incumbent pushback (Trip Optimizer)** → Lead with low- capex, fast time- to- value; position as “first step” efficiency.
-

8) Operating Cadence

- **Weekly:** 30- min pipeline & deal ops.
 - **Monthly:** Enablement refresh; content updates.
 - **Quarterly (QBR):** Scorecard review vs. targets; renew/adjust plan.
-

9) Next Steps

- 1) Send this memo + redlines to Holland counterpart (today).

- 2) Schedule kickoff to draft named- account map (within 7 days).
 - 3) Finalize POC kit + adoption playbook v1 (by end of Week 2).
 - 4) Confirm data- sharing mechanics & security review (by end of Week 2).
-

Appendix A — Named- Account Hypotheses (Working List)

- **High- fit shortlines:** Energy/aggregates, high throttle variability, receptive to low- capex tools; ops leaders known to Holland field teams.
- **Prioritization signals:** Fuel exposure, on- time pressure, safety culture, openness to pilot on select routes.

Appendix B — Messaging Guardrails (Crew- First)

- **Do say:** “Helps you run smoother, reduce rework, cut wasted fuel, and arrive more predictably.”
 - **Don’t say:** “Autopilot,” “surveillance,” “replace engineers,” or anything implying loss of craft.
 - **Transparency:** What data we collect, why, and how it improves schedules and fuel.
-

One- Slide: Holland Partner Scorecard (v1)

Goal: Decide go/no- go and track partner performance in first 90 days.

Fit & Access

- Coverage of shortlines/regionals
- C- suite and ops champions identified
- 6 exec intros scheduled in 30 days

Execution Readiness

- Named- account map (25 logos)
- Trained 10+ field staff on adoption playbook
- POC kit signed off; data- sharing path validated

Early Outcomes (90- day Gate)

- ≥3 POCs signed
- ≥1 production contract
- ≥70% active crew usage in POC
- Documented savings case (CI- backed)

Commercials & Governance

- Non- exclusive; no reseller/white- label
- Referral 10–15% or success- fee model
- Joint weekly, monthly, QBR cadence

Risk Flags

- Slow intros / slipped timelines
- Data access blocked
- Messaging drift (autopilot claims)

Go/No- Go Bar

- **Go:** Gate metrics met and pipeline ≥ 5 qualified deals
- **No- Go:** < 3 POCs or failure to deliver data rights

Owner(s): RailVision CSO (lead) • Sales (co- lead) • Holland channel lead
